Patients randomised and consenting to ITT analyses: 6065 cases

Blood samples collected for DNA extraction: 3109 cases

DNA extraction and genotyping successful: 2939 cases

Clinical outcome data available: 2929 cases

Blood samples not collected: 2956 cases

Failed DNA extraction/genotyping/non-causian ancestry: 170 cases

Clinical outcome data missing: 10 cases

SCOT cohort

Patients randomised: 2445 cases (COIN)
226 cases (COIN-B)

Blood samples collected for DNA extraction: 2368 cases

DNA extraction and genotyping successful: 1950 cases

Clinical outcome data available: 1948 cases

Failed DNA extraction or genotyping: 418 cases

Clinical outcome data missing: 2 cases

COIN/COIN-B cohort
