Support information material

Supplementary Figures

Supplementary Figure 1. Effect of CME inhibition on cellular uptake of the nanogel. Live cell confocal fluorescence microscopy images of the Hela cells transfected with si-CHC treated with nanogels for 7 h. Each row, from left to the right, represent maximum projection, Z section and DIC images.
Supplementary Figure 2. Effect of si-Cav-1 depletion on cellular uptake of the nanogel. Live cell confocal microscopy observation of the Alexa488-nanogels incubated with si-Cav-1 transfected cells for 7 h. Each row, from left to the right, represent maximum projection, Z section and DIC images.
