# PROOF COVER SHEET

---

Author(s): Weidong Li

Article title: Editorial for the special issue of decision support for sustainable design and manufacturing

Article no: TJCI 1000404

Enclosures: 1) Query sheet  
2) Article proofs

---

Dear Author,

**1. Please check these proofs carefully.** It is the responsibility of the corresponding author to check these and approve or amend them. A second proof is not normally provided. Taylor & Francis cannot be held responsible for uncorrected errors, even if introduced during the production process. Once your corrections have been added to the article, it will be considered ready for publication.

Please limit changes at this stage to the correction of errors. You should not make trivial changes, improve prose style, add new material, or delete existing material at this stage. You may be charged if your corrections are excessive (we would not expect corrections to exceed 30 changes).

For detailed guidance on how to check your proofs, please paste this address into a new browser window:  
<http://journalauthors.tandf.co.uk/production/checkingproofs.asp>

Your PDF proof file has been enabled so that you can comment on the proof directly using Adobe Acrobat. If you wish to do this, please save the file to your hard disk first. For further information on marking corrections using Acrobat, please paste this address into a new browser window: <http://journalauthors.tandf.co.uk/production/acrobat.asp>

---

**2. Please review the table of contributors below and confirm that the first and last names are structured correctly and that the authors are listed in the correct order of contribution.** This check is to ensure that your name will appear correctly online and when the article is indexed.

Sequence	Prefix	Given name(s)	Surname	Suffix
1		Rossi	Setchi	
2		Ying	Liu	
3		Weidong	Li	

Queries are marked in the margins of the proofs, and you can also click the hyperlinks below. Content changes made during copy-editing are shown as tracked changes. Inserted text is in **red font** and revisions have a **blue** indicator . Changes can also be viewed using the list comments function. To correct the proofs, you should insert or delete text following the instructions below, but **do not add comments to the existing tracked changes**.

## AUTHOR QUERIES

### General points:

1. **Permissions:** You have warranted that you have secured the necessary written permission from the appropriate copyright owner for the reproduction of any text, illustration, or other material in your article. Please see <http://journalauthors.tandf.co.uk/permissions/usingThirdPartyMaterial.asp>.
2. **Third-party content:** If there is third-party content in your article, please check that the rightsholder details for re-use are shown correctly.
3. **Affiliation:** The corresponding author is responsible for ensuring that address and email details are correct for all the co-authors. Affiliations given in the article should be the affiliation at the time the research was conducted. Please see <http://journalauthors.tandf.co.uk/preparation/writing.asp>.
4. **Funding:** Was your research for this article funded by a funding agency? If so, please insert ‘This work was supported by <insert the name of the funding agency in full>’, followed by the grant number in square brackets ‘[grant number xxxx]’.
5. **Supplemental data and underlying research materials:** Do you wish to include the location of the underlying research materials (e.g. data, samples or models) for your article? If so, please insert this sentence before the reference section: ‘The underlying research materials for this article can be accessed at <full link>/ description of location [author to complete]’. If your article includes supplemental data, the link will also be provided in this paragraph. See <<http://journalauthors.tandf.co.uk/preparation/multimedia.asp>> for further explanation of supplemental data and underlying research materials.
6. The **CrossRef database** ([www.crossref.org/](http://www.crossref.org/)) has been used to validate the references. Changes resulting from mismatches are tracked in **red font**.

## How to make corrections to your proofs using Adobe Acrobat/Reader

Taylor & Francis offers you a choice of options to help you make corrections to your proofs. Your PDF proof file has been enabled so that you can mark up the proof directly using Adobe Acrobat/Reader. This is the simplest and best way for you to ensure that your corrections will be incorporated. If you wish to do this, please follow these instructions:

1. Save the file to your hard disk.
2. Check which version of Adobe Acrobat/Reader you have on your computer. You can do this by clicking on the “Help” tab, and then “About”.

If Adobe Reader is not installed, you can get the latest version free from <http://get.adobe.com/reader/>.

3. If you have Adobe Acrobat/Reader 10 or a later version, click on the “Comment” link at the right-hand side to view the Comments pane.
4. You can then select any text and mark it up for deletion or replacement, or insert new text as needed. Please note that these will clearly be displayed in the Comments pane and secondary annotation is not needed to draw attention to your corrections. If you need to include new sections of text, it is also possible to add a comment to the proofs. To do this, use the Sticky Note tool in the task bar. Please also see our FAQs here: <http://journalauthors.tandf.co.uk/production/index.asp>.
5. Make sure that you save the file when you close the document before uploading it to CATS using the “Upload File” button on the online correction form. If you have more than one file, please zip them together and then upload the zip file.

If you prefer, you can make your corrections using the CATS online correction form.

## Troubleshooting

**Acrobat help:** <http://helpx.adobe.com/acrobat.html>

**Reader help:** <http://helpx.adobe.com/reader.html>

Please note that full user guides for earlier versions of these programs are available from the Adobe Help pages by clicking on the link “Previous versions” under the “Help and tutorials” heading from the relevant link above. Commenting functionality is available from Adobe Reader 8.0 onwards and from Adobe Acrobat 7.0 onwards.

**Firefox users:** Firefox’s inbuilt PDF Viewer is set to the default; please see the following for instructions on how to use this and download the PDF to your hard drive: [http://support.mozilla.org/en-US/kb/view-pdf-files-firefox-without-downloading-them#w\\_using-a-pdf-reader-plugin](http://support.mozilla.org/en-US/kb/view-pdf-files-firefox-without-downloading-them#w_using-a-pdf-reader-plugin)

## EDITORIAL

### Editorial for the special issue of decision support for sustainable design and manufacturing

Sustainable design and manufacturing is of critical importance to all manufacturers in order to gain competitive advantage and become economically sustainable in the long run. As natural resources become limited and energy costs keep rising, minimizing negative environmental and societal impacts while maintaining economically viable has become a paramount issue for design and creation of manufactured goods. In the progression of sustainable design and manufacturing, decision support remains as a central task in managing various complex trade-offs in materials, design, processes, and services through the entire life cycle. Several notable challenges exist, to name a few, prolonged information cycle, obscure information concerning impact assessment, complex modeling of hierarchical and heterogeneous information, data dynamics and uncertainty, and so on. Therefore, this special issue is dedicated to reveal the state-of-the-art of a broad concept of decision support in the context of sustainable design and manufacturing and endeavor how such research efforts can benefit a wider community from design and manufacturing, to business and social science.

The first paper, “The Importance of Understanding the Business Context when Planning Eco-design Activities” by Domingo, Buckingham, Dekoninck and Cornwell, offers a novel management tool called Company Characterization Process (CCP) to support design change happened in a typical project of eco-design. Essentially, CCP aims to better reflect the current status of the company which has committed to an eco-design initiative and is able to characterize seven salient features of its business context that have major impacts on the effectiveness and efficiency when executing eco-design activities. Two case studies are provided, respectively, to rationalize the proposal of CCP and demonstrate its merits in shaping early design activities in companies which are new to eco-design.

“Value Mapping for Sustainable Business Thinking” by Bocken, Rana and Short, reports their efforts in exploring how sustainable business thinking, which seeks to integrate considerations of the three dimensions of sustainability – social, environmental, and economic – can be systematically supported using value mapping as a tool and process. Among the many issues that have been discussed, one key finding particularly shows that the inclusion of multiple stakeholders and a systematic consideration of both positive and negative outcomes of doing business can provide a useful supporting framework for sustainable business thinking and it has the

potential to better consider unintended impacts and to offer greater alignment between stakeholders’ interests.

“Maturity Grid Development for Energy and Resource Efficiency Management in Factories and Early Findings from its Application” by Litos and Evans, targets specifically on how management practices, systems, and processes can impact environmental performance in factories. Different from the prevailing studies centered on how eco-efficiency in production activities can be defined in a way facilitating its subsequent calculation, the authors argue that environmental performance can hardly be strictly defined numerically, and hence, present their findings primarily based on environmental performance benchmarking and guidelines in the form as a maturity grid through which system properties can be reflected and system behaviors can be analyzed.

Among the many tasks in considering sustainability in asset management, one critical challenge is to balance the trade-offs between conflicting objectives. In this regards, “A Multi-criteria Decision Support Framework for Sustainable Asset Management and Challenges in its Application” by Niekamp, Bharadwaj, Sadhukhan, and Chryssanthopoulos, has offered a viable approach to tackle this issue. Relying on a multi-criteria decision analysis framework proposed, the authors have managed to integrate all major sustainability criteria over the whole life cycle. Participations from various stakeholders and assessment of uncertainty associated are all considered explicitly so that the results derived from the proposed framework stand by themselves in higher confidence.

By acknowledging the challenges and barriers of implementing sustainability in the manufacturing firms, Koho, Tapaninaho, Heilala, and Torvinen have proposed a structured approach for measuring, improving and managing sustainability performance in the paper “Towards a Concept for Realizing Sustainability in the Manufacturing Industry.” Based on a generic framework of Define, Measure, Analyze, Improve and Control (DMAIC), the study has shown its applicability to Finnish manufacturing industry.

“A Framework for Material Flow Assessment in Manufacturing Systems” by Gould and Colwill, works on a methodology in assessing material efficiency in production systems. While it is generally known that radical improvements in material efficiency are needed so to assist manufacturing companies lowering negative environment impact and sustain manufacturing activities in the long term, literature survey shows that research

5 efforts are considered insufficient in this aspect. To cope with the difficulty, the proposed methodology uses a combined approach of quantitative and qualitative means to model and assess material flow efficiency. A case study is presented to illustrate the process of implementation.

10 The six articles selected for this special issue were nominated from the accepted papers initially submitted to the International Conference on Sustainable Design and Manufacturing 2014 in Cardiff, UK. After an extensive enrichment on theoretical foundation, research methodology and case study, these six articles were further revised and improved after two rounds of rigorous reviews conducted by the special issue. In the first  
15 round, each paper was peer reviewed by at least two

reviewers, and in the second round, the revised articles were reviewed by the guest editors. We would like to take this opportunity to thank all contributing authors for their excellent work. We are very grateful to the reviewers for offering their precious time and efforts and for providing constructive comments. Without all of you, this special issue would not be possible.
